

Research Areas

Philosophy of Science, Epistemology

My research interests are broadly related to Philosophy of Science and Epistemology. In Philosophy of Science, my research focus is on theories of confirmation and theories of explanation. In theories of confirmation, I mainly work on 'Bayesian Confirmation Theory'. My focus is on the formulation of a theory of confirmation so as to include the role of the 'Best Competitor Hypothesis'. In Theories of Explanation, I focus is on the 'Unification Model of Explanation'. I am also interested in exploring philosophical theories of Probability, especially seeking the revival of the logical interpretation of probability. In Epistemology, my main focus of research is related to the Gettier Problem and its solution.
