

## **SCDT-FlexE Centre Webinar Series on Flexible Electronics**

### **Guidelines for webinar**

The following could be the broad guidelines for the webinars:

- (i) A webinar will be held every month. Normally it will be on Tuesdays of the second complete week of the month. If that day is not available due to festivals or other reasons, the webinar could be held a week earlier or later on Tuesdays. The time for the webinar will be typically at 7:30 PM (IST) and will be for one hour duration.
- (ii) The audience is expected to be those working in the area of flexible electronics including faculty members, researchers, Ph.D. and other post-graduate students and senior under-graduate students. Experts from industry could also be invited to give a webinar.
- (iii) The subject of the webinar will preferably be based on research work in which the speaker is/was directly involved.
- (iv) Provided permission is granted by the speaker, the webinar will be recorded. If requested, sections of unpublished data being shared will not be recorded.
- (v) The immediate goal of the webinar series is to bring together researchers working in the area of flexible electronics in India and those collaborating with teams in India. In time, this goal may be expanded to include anyone around the world interested in flexible electronics.

The above guidelines are just to get us started. Depending on interest of the flexible electronics community, these can be tuned or modified.
